

The creation of a world-first device; The IOM inhalable dust sampler

IOM pioneered a first-of-its-kind device; The IOM inhalable dust sampler which has enabled the measurement of the inhalable fraction; a measurement that is critical in determining the safety of workplace dusts and aerosols.

The simple, yet powerful device has made an impact across the world, ensuring better controlled work environments and improved worker health across a variety of sectors and industries including manufacturing, chemicals, pharmaceuticals and agriculture.
